

# APPLICATION DATA SHEET

## BLACKFAST 250 SOLVENT DEGREASER

USE: Use as supplied.

APPLICATION: Blackfast 250 is a powerful degreaser used as the first step in the preparation of clean metal surfaces prior to the blacking process. Immersion in a single tank for 10 minutes for removal of normal oil and grease will suffice. For more heavily greased items, it may be necessary to use 2 tanks, the first to remove the bulk of oil and grease and the second for any remaining traces. When the first tank is spent, the second tank becomes the first. A layer of water can be floated on the top of the tank thus minimising evaporation. Degreased items will dry rapidly by evaporation thereby minimising the delay before the next part of the process.

TANK MAINTENANCE: Maintain the tank by removing 10% periodically and top up with fresh Blackfast 250. Below 10°C the reaction is slow, necessitating much longer treatment times.

TANK MATERIAL: Tanks should be made of mild steel.

PRODUCT SAFETY DATA SHEET: A safety data sheet is available.

Blackfast 250 is part of the Blackfast range of products for the treatment of iron, steel and aluminium at low temperatures.

Blackfast Chemicals continues to improve the quality and performance of its range of products and reserves the right to modify product formulations without prior notice.
